DEPARTMENT OF AGRICULTURE, FISHERIES AND FORESTRY

\$220m to secure Australia's fishing future

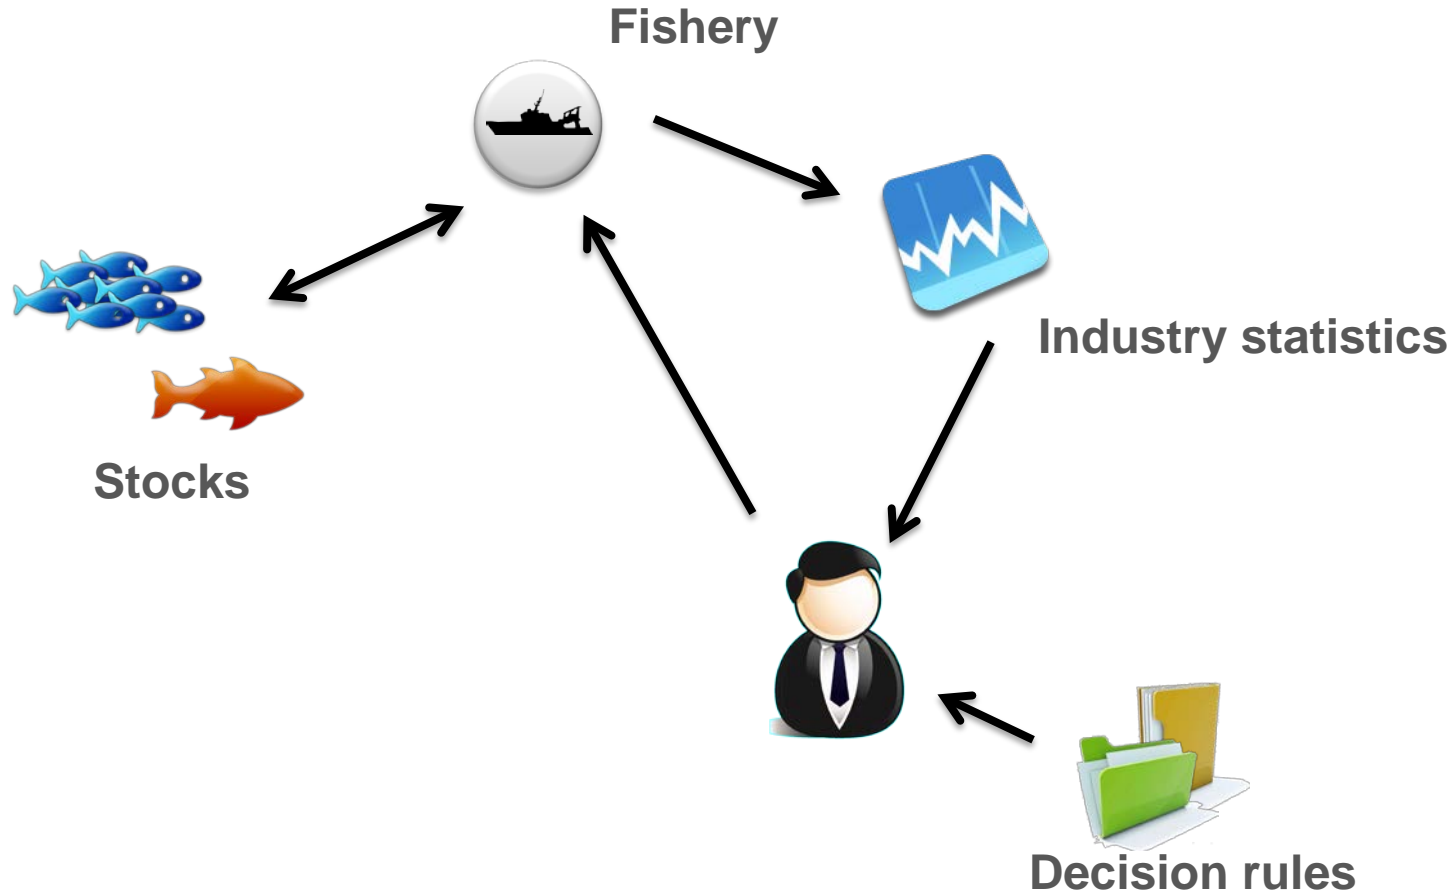

Fisheries Minister Ian Macdonald announces the \$220m adjustment package earlier today.

The Minister for Fisheries, Senator Ian Macdonald today announced a \$220 million adjustment package to help secure Commonwealth fish stocks and a profitable future for the fishing industry. The *Securing our Fishing Future* package follows concerns about the state of Australia's fish stocks, and the sustainability and profitability of the industry.

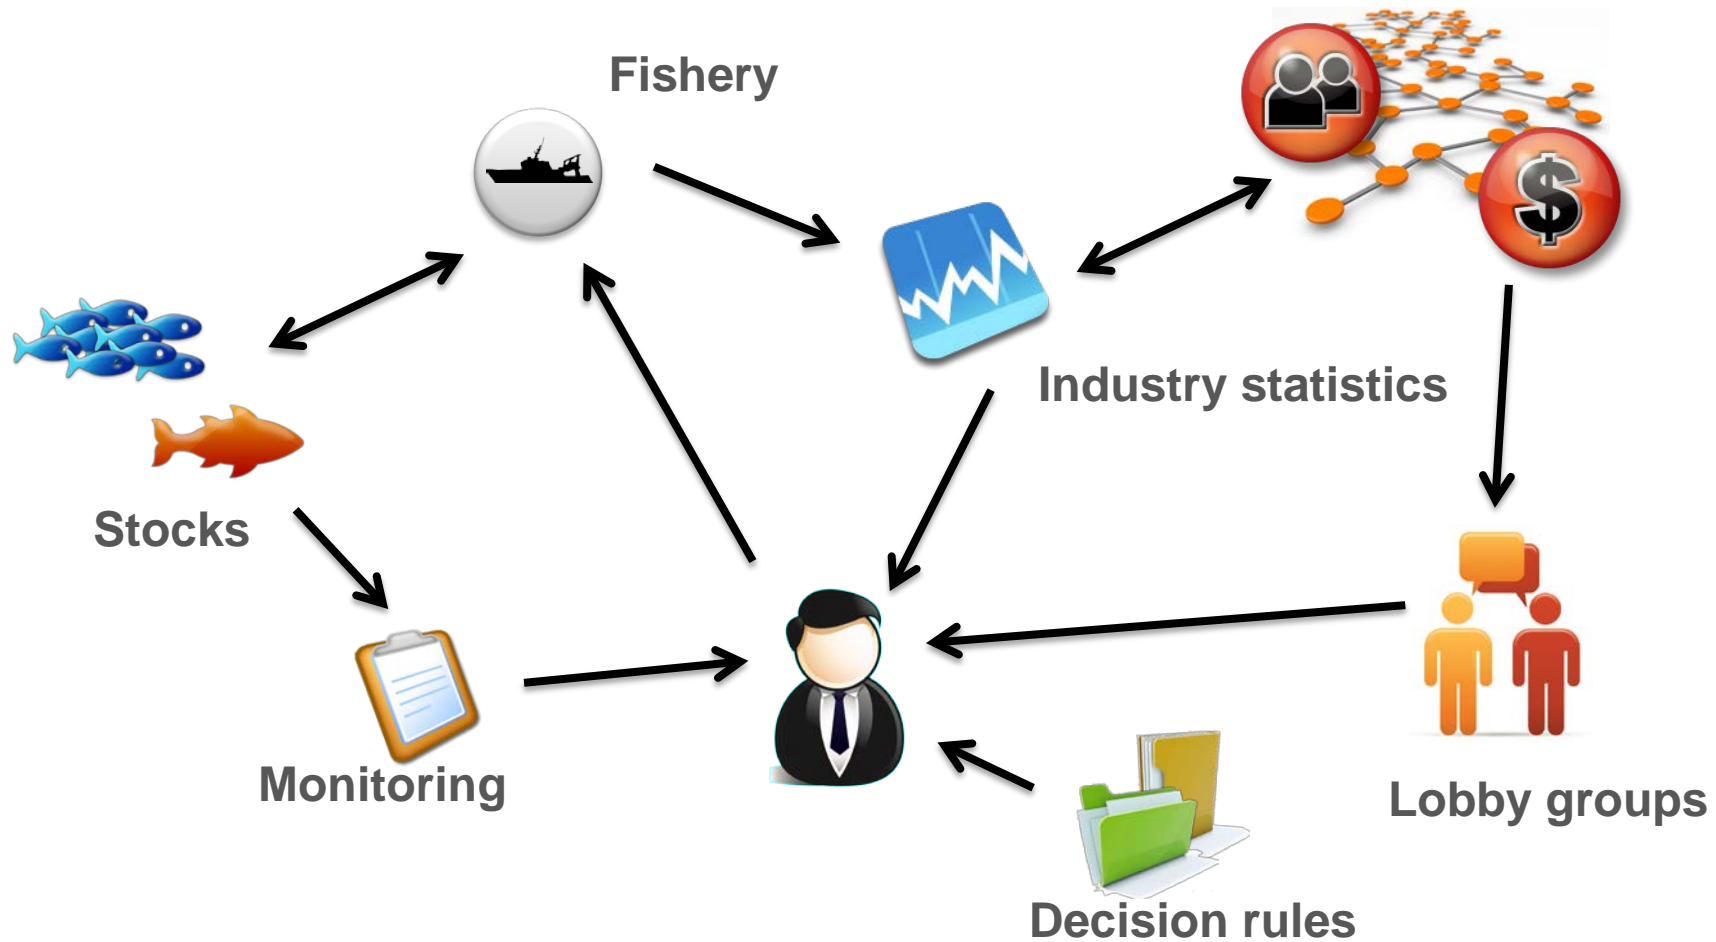

The Government will provide a major package of one-off structural adjustment and improved management measures for those fisheries managed by the Australian Government. As part of the measures, AFMA has today released new catch limits for the SESS and effort limits in the ETBF (further information follows).

Disciplinary Focus

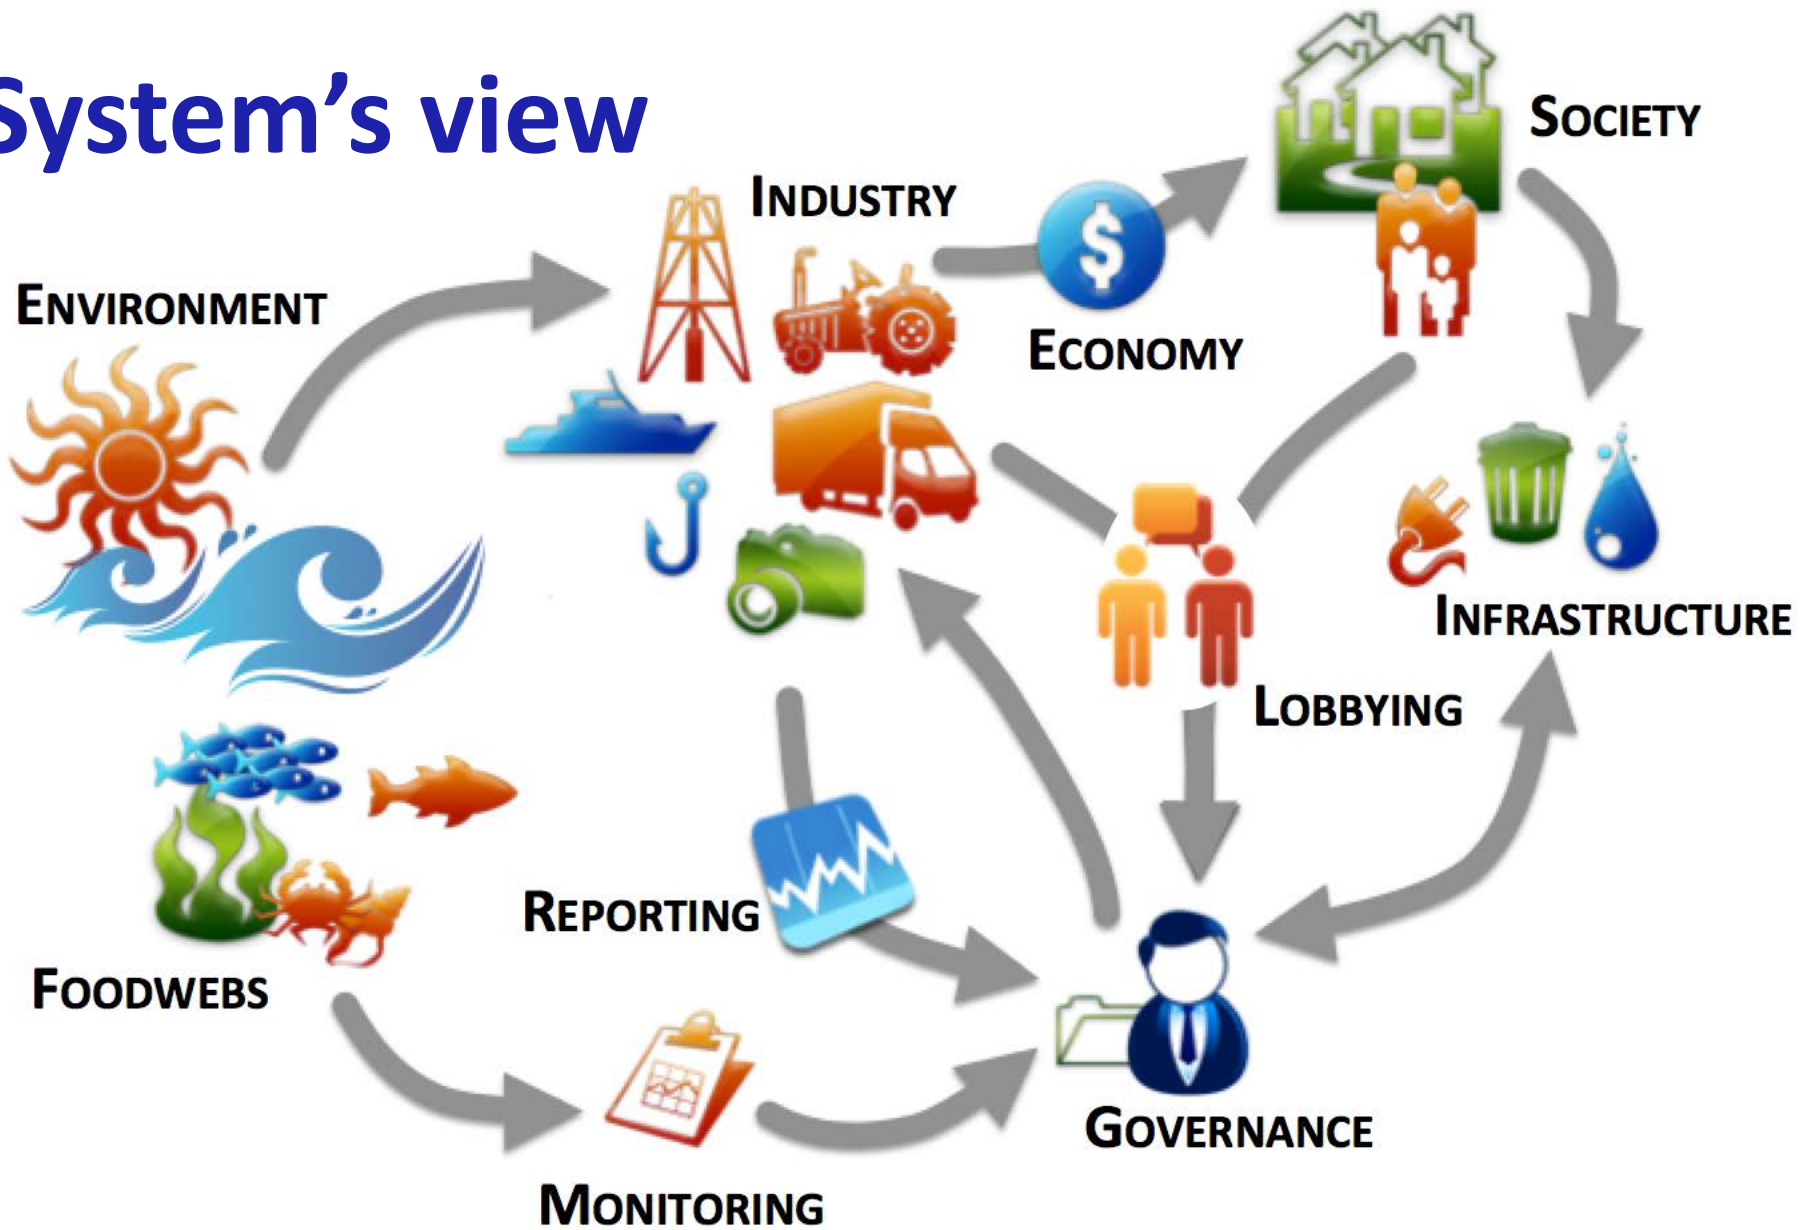

- Best management = quotas (mostly)

Cross-disciplinary Links

- Effective management = quotas + spatial + gear restrictions

System's view

Australians - The Coastal Species

Aquatic Revolution

Conflicts & Resolution

Conflicts & Resolution... Maybe

Engagement of Knowledge Systems

- Expanding appreciation & integration
- Participatory

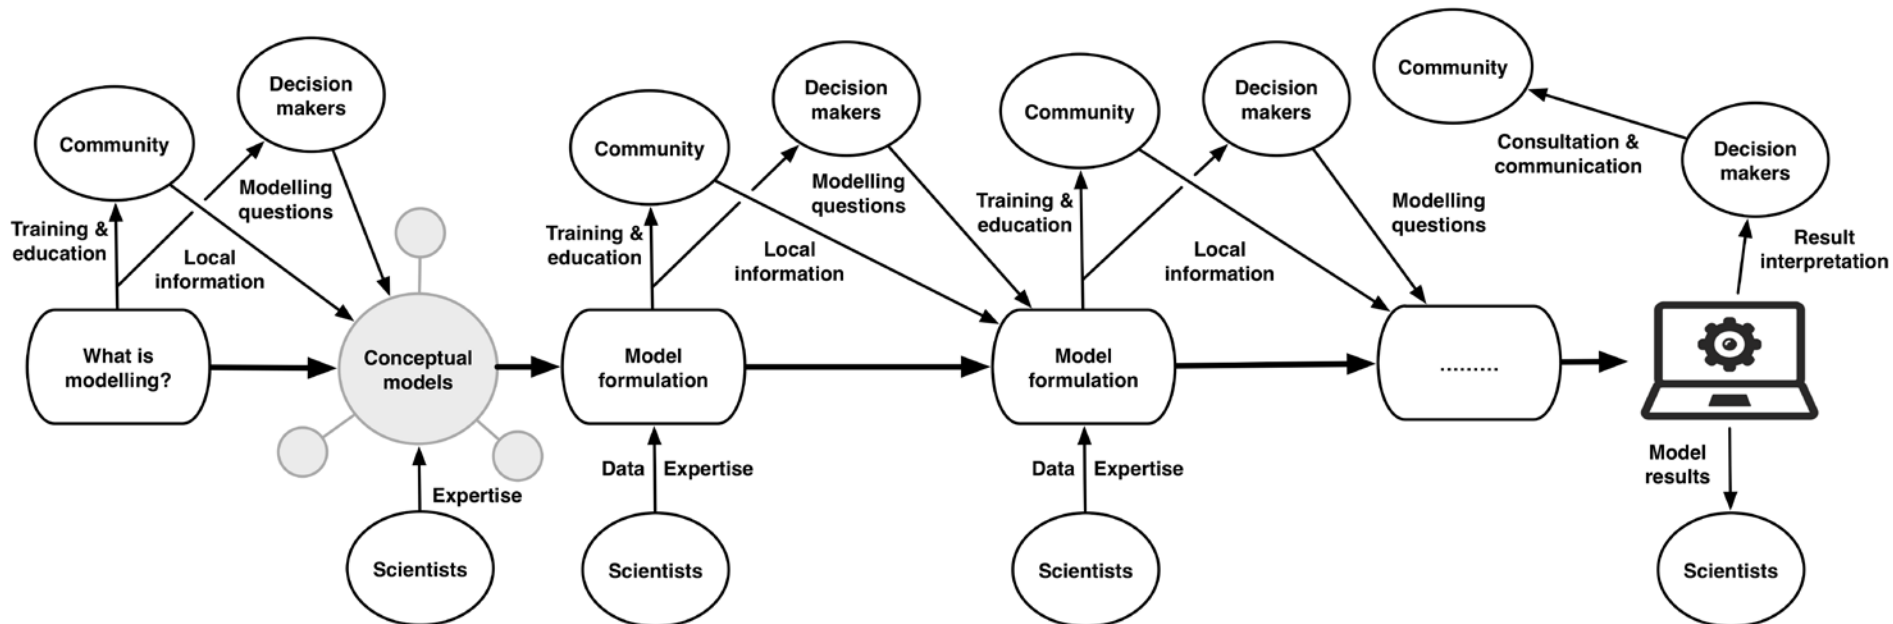

Systems = Consideration of options ...unfortunately

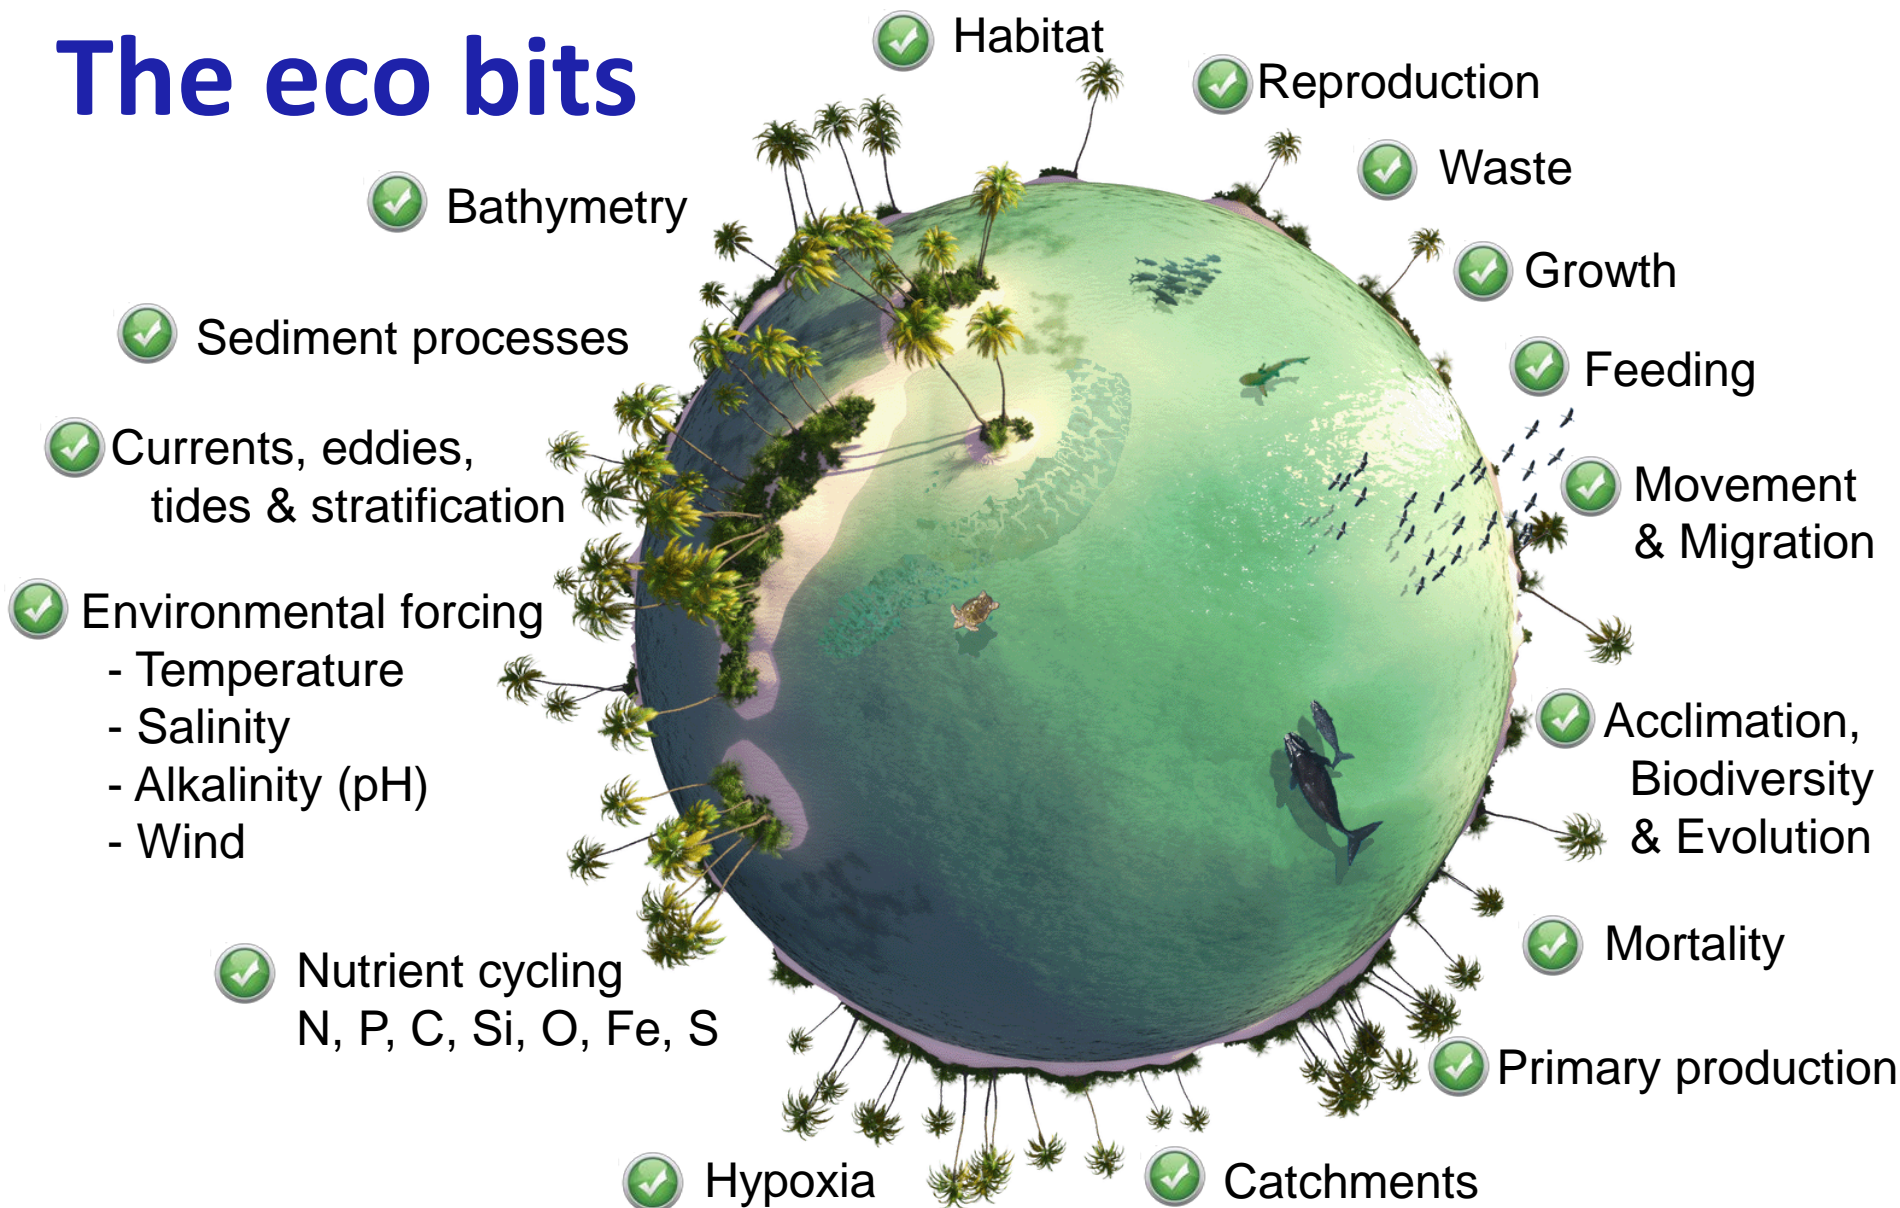

Participatory Recipe for Success

1. Check the ego
2. Clear communication
3. Take the time to build trust
4. Work with people & iteratively
(those involved & with different points of view)

Why did it falter?

The eco bits

Human bits

- ✓ Social networks
- ✓ Attitudes
- ✓ Behaviour & decisions

- ✓ Monitoring
- ✓ Assessments
- ✓ Control Rules
- ✓ Regulation

Urban (& residential)
✓ development
& infrastructure
(including ports)

Limits
Governance
Integration & feedbacks

✓ Energy

✓ Agriculture

✓ Transport
(& shipping)

✓ Tourism

✓ Land use

✓ Forestry

✓ Population

- ✓ Economy
- ✓ Markets
- ✓ Trade
- ✓ Costs
- ✓ Revenue
- ✓ Investment

✓ Catchments

✓ Non-renewable
Resources (oil,
gas, mining)

✓ Fisheries
(commercial &
recreational)

Scales

14 orders of magnitude

Handling multiple scales

	Individual	Patch	Local	Regional	Global
Physical					
Ecological					
Economic					
Social/Cultural					
Management (& Institutions)					

- Modelling weakest at intermediate scales & for socially related

Jurisdictional Complications

- Theory vs Practice
- Time poor & high staff turn over
- Champions are hard to find...

Distrust of models

- Familiarity & trust (competency, integrity, warmth)
- Easy to blame the modeller (nerds still aren't cool)
- Science = one voice (how much relative trust to place in it?)
- Honest broker and participatory approach misunderstood

You're in the pocket of...
<insert disliked group of choice>

Knowledge vs Simplification Comfort

- “I’m not a modeller”
 - give up or latch on to detail to “make it real”

- Don't appreciate value of improved thinking
- Assume desire crystal ball & as can't be done write it all off

Trust (own) mental models

"I trust my gut..."

- Mental models = mix of emotions & function
- Multiple (inconsistent) models held simultaneously
- Static past, now, future rather than system dynamic view

Message related?

- Scientific use colours message received (greenhouse, blanket, bath tub, addiction, disease)

Distrust of ^{some} models

- “The economic projections say...”
- Different levels of acceptance
- Accident of history?
- Different standards?

...reflects on how economics has become central to our lives, and how the 'economic rationalist' perspective has become the lens through which all matters in Australian public life are viewed...

Message related?

- Messages (vs desires)
 - Trade-offs less palatable than “win-win”
- Simplification of the message vs improved focus
 - Specificity
 - Non-linearity
 - Long timeframes

Not things we are naturally good at

How get better uptake

- Understand trust, psychology, attitudes
- More than box ticking (needs true, equal, integration)
 - Tiramisu score

Ways of Thinking

Focused

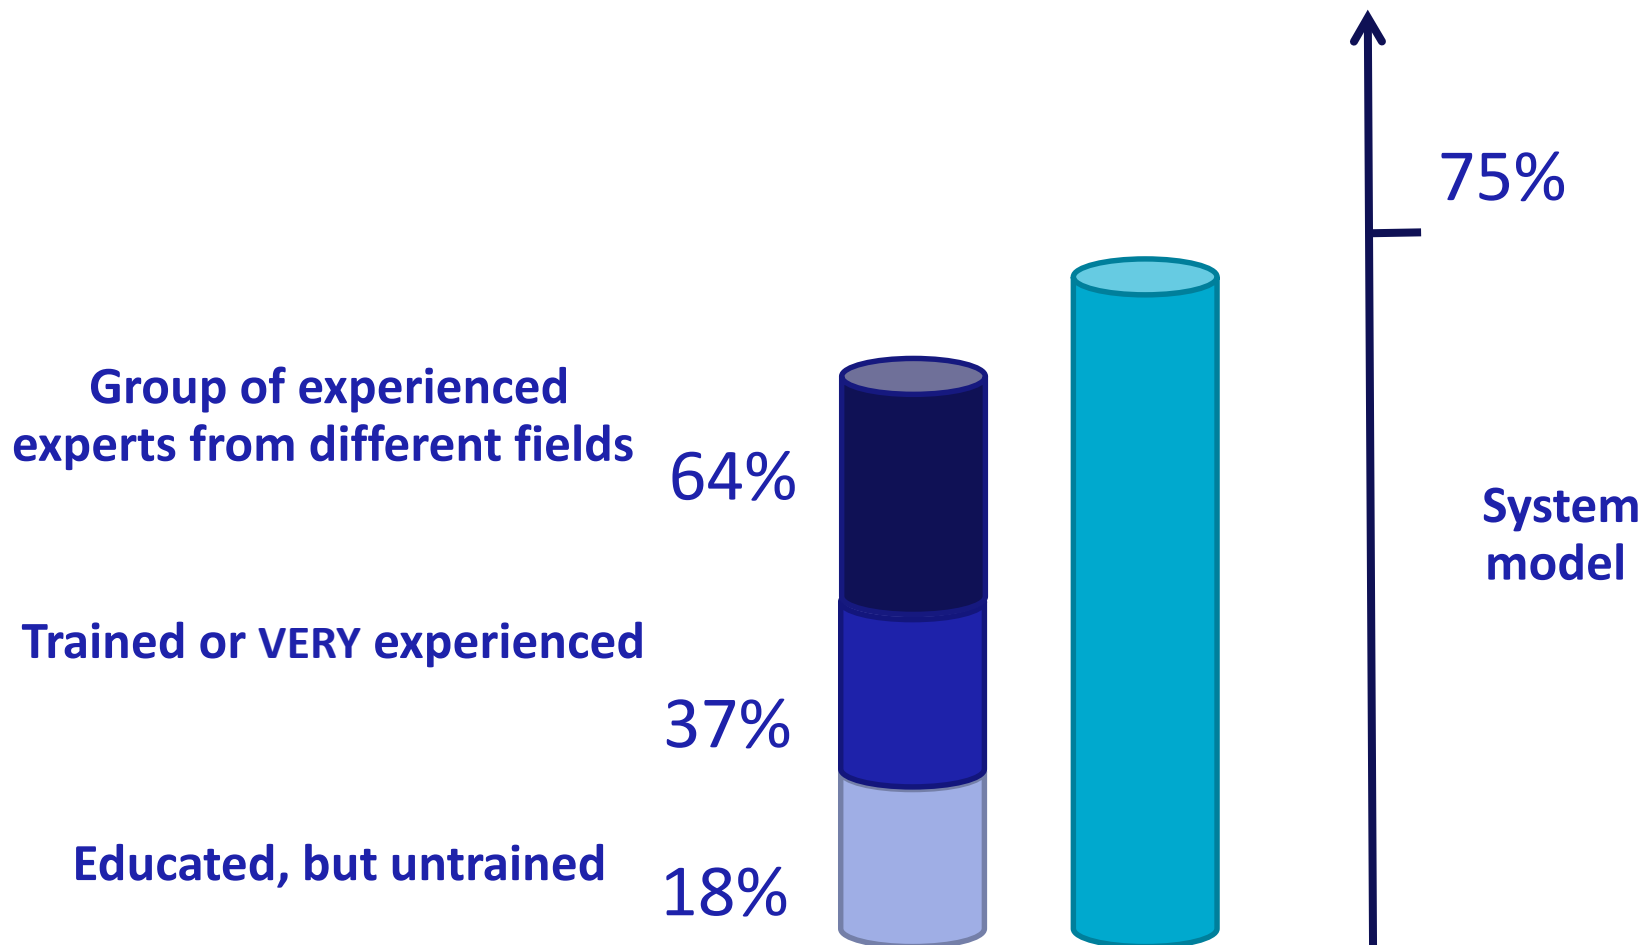

Broad

Skill Assessment

Model not always right, why should I care about them?

How get better uptake

- New ways of doing things (share more existing lessons?)
- Time to educate too short, compromise position needed?
- Systems learning added to tools people at ease with?

Summary

- System approaches have had major success
- Hard won lessons are struggling with new challenges
 - 1) Modelling new scales & components
 - 2) Engaging at new scales & battling scepticism
 - 3) Human psychology & trust critical
 - 4) Technology, communication, capacity based solutions?
 - 5) Alternative (e.g. hybrids) required?

Thank you
